KLAUER MANUFACTURING COMPANY PRODUCT BULLETIN

NEW AND IMPROVED TOUCH-UP PAINT

FOR KLAUER CLASSIC AND ELITE STEEL SIDING COLOR PALLET

A newly available, high quality touch-up paint system has replaced our existing inventory which was made of acrylic modified enamel resins. PVDF resin-based paints outperform other commercially available liquid, air dry coatings. Applications of this new touch-up paint can be expected to maintain color and film integrity 2 to 3 times longer.

Our desire to supply the highest quality products and services has led us to make this change. The cost increase of the new formulation matches its superior performance. New and updated pricing will be distributed. Please contact our Customer Service team if you have questions or concerns.

Please be aware that air dry touch-up paint of any formulation is inferior to our baked-on factory applied, Silicon Modified Polyester paint systems utilized on our products. Prior to the application of touch-up paint, please review our Product Bulletin "**THE INTENDED AND PROPER USE OF TOUCH-UP PAINT**".
